# ULTRAVIOLET CURING LAMP

## PART #15060

**CONGRATULATIONS ON CHOOSING A DELTA KITS 15060 U.V. CURING LAMP.** Your new lamp has been designed to provide the most desirable features, best performance, and when used properly, years of trouble-free operation. ***Please read the following instructions carefully before using this unit.***

### ***LIMITED WARRANTY***

The precision quality lamp you have chosen is of the finest design and craftsmanship. As such, Delta Kits, Inc. warrants that when delivered it will be free from defects in manufacture. Delta Kits' obligation under this warranty is limited to repairing or replacing, at our discretion, the complete lamp or any parts there of which prove upon inspection to be defective in materials or workmanship within **one year from the date of the sales invoice**.

This warranty does not apply to UV bulbs or to any lamps or parts thereof, which to our discretion, have been abused, misused, dropped, or otherwise damaged by the neglect of the user. Implied warranties of fitness for purpose, and merchantability are also excluded.

This warranty and your remedies thereunder are solely as stated in this document. In no event shall Delta Kits, Inc. be liable for special, indirect, incidental or consequential damages, nor for any damages arising out of delay in shipment or production.

To qualify for service under this warranty, it will be necessary for you to furnish proof of purchase, including a copy of your purchase invoice.

Do not return lamp without first contacting Delta Kits customer service for return authorization and instructions.

**Please call 800-548-8332 if you have any questions, or if you wish to claim service under this warranty.**

### **WARNING**

UV lamps produce ultraviolet radiation which can be hazardous to the eyes and skin. Therefore, use of UV absorbing protective eyewear is recommended when you find it necessary to look into the direct or reflected rays from any UV light source, including the sun.

## OPERATION

1. Lightly moisten the suction cups (part# 16080) with water or glass cleaner.
2. Attach the lamp by pushing down firmly until the suction cups flatten.
3. Plug your lamp into the appropriate 120V power source.
4. Flip the (–) switch for POWER ON and the (O) switch to POWER OFF the light. The bulb may flicker for a moment (especially when cold) but will stabilize in seconds.
5. For maximum life, turn off when not in use.

## MAINTENANCE

**Always unplug lamp from power source before attempting any cleaning or bulb replacement. ALL SERVICE TO THE ELECTRICAL COMPONENTS SHOULD BE REFERRED TO A QUALIFIED TECHNICIAN.**

1. **Bulb and lens replacement:** If the 4W UV bulb (part# 16000) fails to light or is broken, disconnect the light from the power supply. Remove the (4) Philips screws (near suction cups) that hold the top and bottom halves of the light together. Twist the bulb to release the end prongs and gently remove the bulb. Clean the reflector and protective shield with a soft, dry cloth. Install a new bulb by sliding the prongs of the bulb into the lamp and gently twist to lock in place. For best results, use a Delta Kits 16000 (blue) or 16010 (white) replacement bulb. Re-install the (4) screws.
2. **Filter modification:** This lamp has been modified to eliminate the need for a separate UV filter. Instead, this lamp is fitted with a special filtered UV bulb, which is then covered with a clear acrylic shield, equipped with (4) suction cups. This modification allows the lamp to cure faster and provides the means of attaching the lamp to a smooth surface such as a windshield or plate glass. The protective shield will help your bulb last longer and keep it cleaner to produce the maximum intensity. Keep shield clean. **It is especially important to avoid getting resin or other chemicals on the shield.**
